

## 21 Yage

### **LEE**

Lee went to Quito to get information on the Yage. Allerton stayed in Salinas. Lee was back five days later.

*To Allerton: in hotel*

Yage is also know to the Indians as Ayahuasca. Scientific name is Bannisteria caapi.

*Lee spreads a map on the bed.*

It grows in high jungle on the Amazon side of the Andes. We will go on to Puyo. That is the end of the road. We should be able to locate someone there who can deal with the Indians, and get the Yage.
